

Pharma Supply Chain Dashboard

Project Report

Prepared by: Prianjali Saha

Tools Used: Microsoft Excel | Power BI

Project Overview

This project analyses pharmaceutical supply chain data to monitor sales performance, inventory levels, supplier efficiency, and profitability. The objective was to transform raw operational data into an interactive Power BI dashboard that enables faster, data-driven business decisions.

Project Workflow

- Cleaned and prepared raw data using **Microsoft Excel**
 - Built an interactive dashboard in **Power BI**
 - Generated KPIs and business insights for decision-making
-

Key Performance Indicators (KPIs)

- Total Revenue
 - Total Profit
 - Total Orders
 - Total Quantity Sold
 - Average Rating
 - Profit Margin
-

Dashboard Features

- Interactive slicers and filters
 - Sales trend analysis
 - Top 10 medicines by sales
 - Supplier performance analysis
 - Inventory monitoring
 - Product details table
 - Dynamic business insights
-

Key Business Insights

- High-demand medicines contributed significantly to total revenue.
- Inventory analysis identified products approaching low stock levels.
- Supplier performance comparison highlighted opportunities to optimise procurement.
- Sales trends revealed periods of higher customer demand, supporting better inventory planning.
- The dashboard provides a single view of business performance, reducing the need for manual reporting.

Business Value

This dashboard enables stakeholders to:

- Monitor sales and inventory in real time
- Identify high-performing products
- Improve inventory management
- Support supplier evaluation
- Make faster, data-driven business decisions

Skills Demonstrated

- Data Cleaning (Excel)
- Power BI Dashboard Development
- KPI Design & Visualisation
- Business Intelligence Reporting
- Analytical Problem Solving

Conclusion

This project demonstrates an end-to-end data analytics workflow—from cleaning raw data and analysing it with Excel to developing an interactive Power BI dashboard. It showcases practical skills in data analysis, visualisation, and business intelligence while delivering actionable insights to improve pharmaceutical supply chain performance.
